Keywords: *vacation standing timber, accounting, contract, lease, sale, tool evaluation, the accuracy rate.*

In the Russian Federation for the forests for timber harvesting and sale of forest plantations in the order of succession is the holiday of standing timber.

When renting woodlots for timber object lease advocate annual volumes of timber harvesting in forest plantations methods stipulated lease agreement or contracts for the sale of forest plantations. It should also be noted that the annual maximum allowable wood removals from forest plantations are subject to Russian law rationing as a component of the environment. Whereby the excess volumes of logging allowed lease agreement and purchase and sale of forest plantations in forest use is not permitted and is classified as a violation of the legislation of the Russian Federation.

In accordance with the division of responsibilities between the specially authorized state authorities of the Russian Federation and the people who use the forest should be considered as a relationship between the seller and the buyer with all the attendant responsibilities.

The quality control of work allotment and taxation cutting areas and their accuracy should be guided by established regulatory criteria and indicators for assessing the quality of the work performed and the accuracy of drainage and taxation of cutting areas, previously used during tempering of forest plantations of standing timber.

Responsibility for the accuracy of the accounting timber is removed from the forest plantations, attributed to the competence of bodies of state power of subjects of the Russian Federation in accordance with the delegated authority from the federal level.

It is the responsibility of the tenant unconditional estimator timber stocks withdrawn from forest plantations, each cutting area and documented as a visual assessment of logging sites are not legally allowed. The problem is that the existing number of officials and technologies used timber accounting bodies of state power of subjects of the Russian Federation is not possible to organize a qualitative account of standing timber and leave from forest plantations in forest lease and purchase and sale of forest plantations.
