

Results of the 6th International Wildland Fire Conference

A. Zhidkov – Russian Research Institute for Silviculture and Mechanization of Forestry, Head department, Candidate of Biological Sciences, Pushkino, Moscow region, Russian Federation, zhidkov_66@mail.ru

Key words: fire science, fighting wildfires, disaster risk reduction, forest fire management, IWFC – 2015

We consider the issues of the VI International Wildland Fire Conference, held October 12-16, 2015, the Republic of Korea (IWFC – 2015). The IWFC adopted a declaration, which reflects demand for the following areas of research: the impact of carbon emissions on climate change, the impact of climate change on fire regimes, the role of forest fires in the land, and their impact on human health, life safety.

The article proposes to increase the participation of Russian specialists and experts in international conferences and congresses. This will help to expand their horizons, knowledge and cutting edge research capacity, enhance the country's prestige in the international scientific community. Participation in international conferences and scientific forums gives benefits such as joint research in collaboration with international research organizations, forest industries and individual scientists; access to the results of international research, and similar benefits. Positioning of the Russian forest fire science and ecology in the international space is very important to create a positive image of the country in the global forest community.
