Abstract. The paper presents analytical materials on publications covering forest ecosystem services assessment in foreign states. Over the last 20 years forest eco-system service studies in foreign states are characterized by exponential growth of publication activity. Basic classifications and key approaches to assess eco-system services in foreign states are available. International and national processes and programs in ecosystem service area are reviewed. Research areas and practical applications of forest eco-system service assessments as a major and integral part of ground ecosystem in general are already shaped now.

Key words: forest use, multiple forest use, forest resource and ecosystem potential, ecosystem services, forest ecosystem service study, natural assets, forest ecosystem biodiversity and productivity.
