Alexandra A. Razdymakho³

Abstract. Discusses the problem of ensuring fire safety on agricultural and forest fund lands. Based on the analysis of regulatory legal acts, it is proposed to solve the problem of ensuring fire safety of these lands and fight against wildfires that have spread from open territories of lands of other categories. Special attention is paid to the formation of an objective information picture of the situation, addressing the issue of the importance of accounting of fires on various categories of land.

Key words: wildfires, forest fires, fire safety, fire records, agricultural land.
